

**NHS.pycom:**

**The Python community for healthcare**

Speakers:

Craig Shenton, Mary Amanuel, Arouba Zubair - NHSX

Alex Cheung - NHS England

# Python is a widely adopted, open source programming language

Compared to other languages, it is relatively easy to learn due to its human readable syntax. As such, Python will play a central role in the 21st century digital transformation of health care

# What is the NHS Python Community?

An open community of practice, driven by enthusiasts and advocates, that champions the use of the python programming language and open code in the NHS and healthcare sector

## NHS.pycom is *not*:

- Offering Consultancy services
- Providing **official** training or certification
- IT support

# Aim 1.

**Reduce barriers to entry by promoting the use and best practice of python tools**

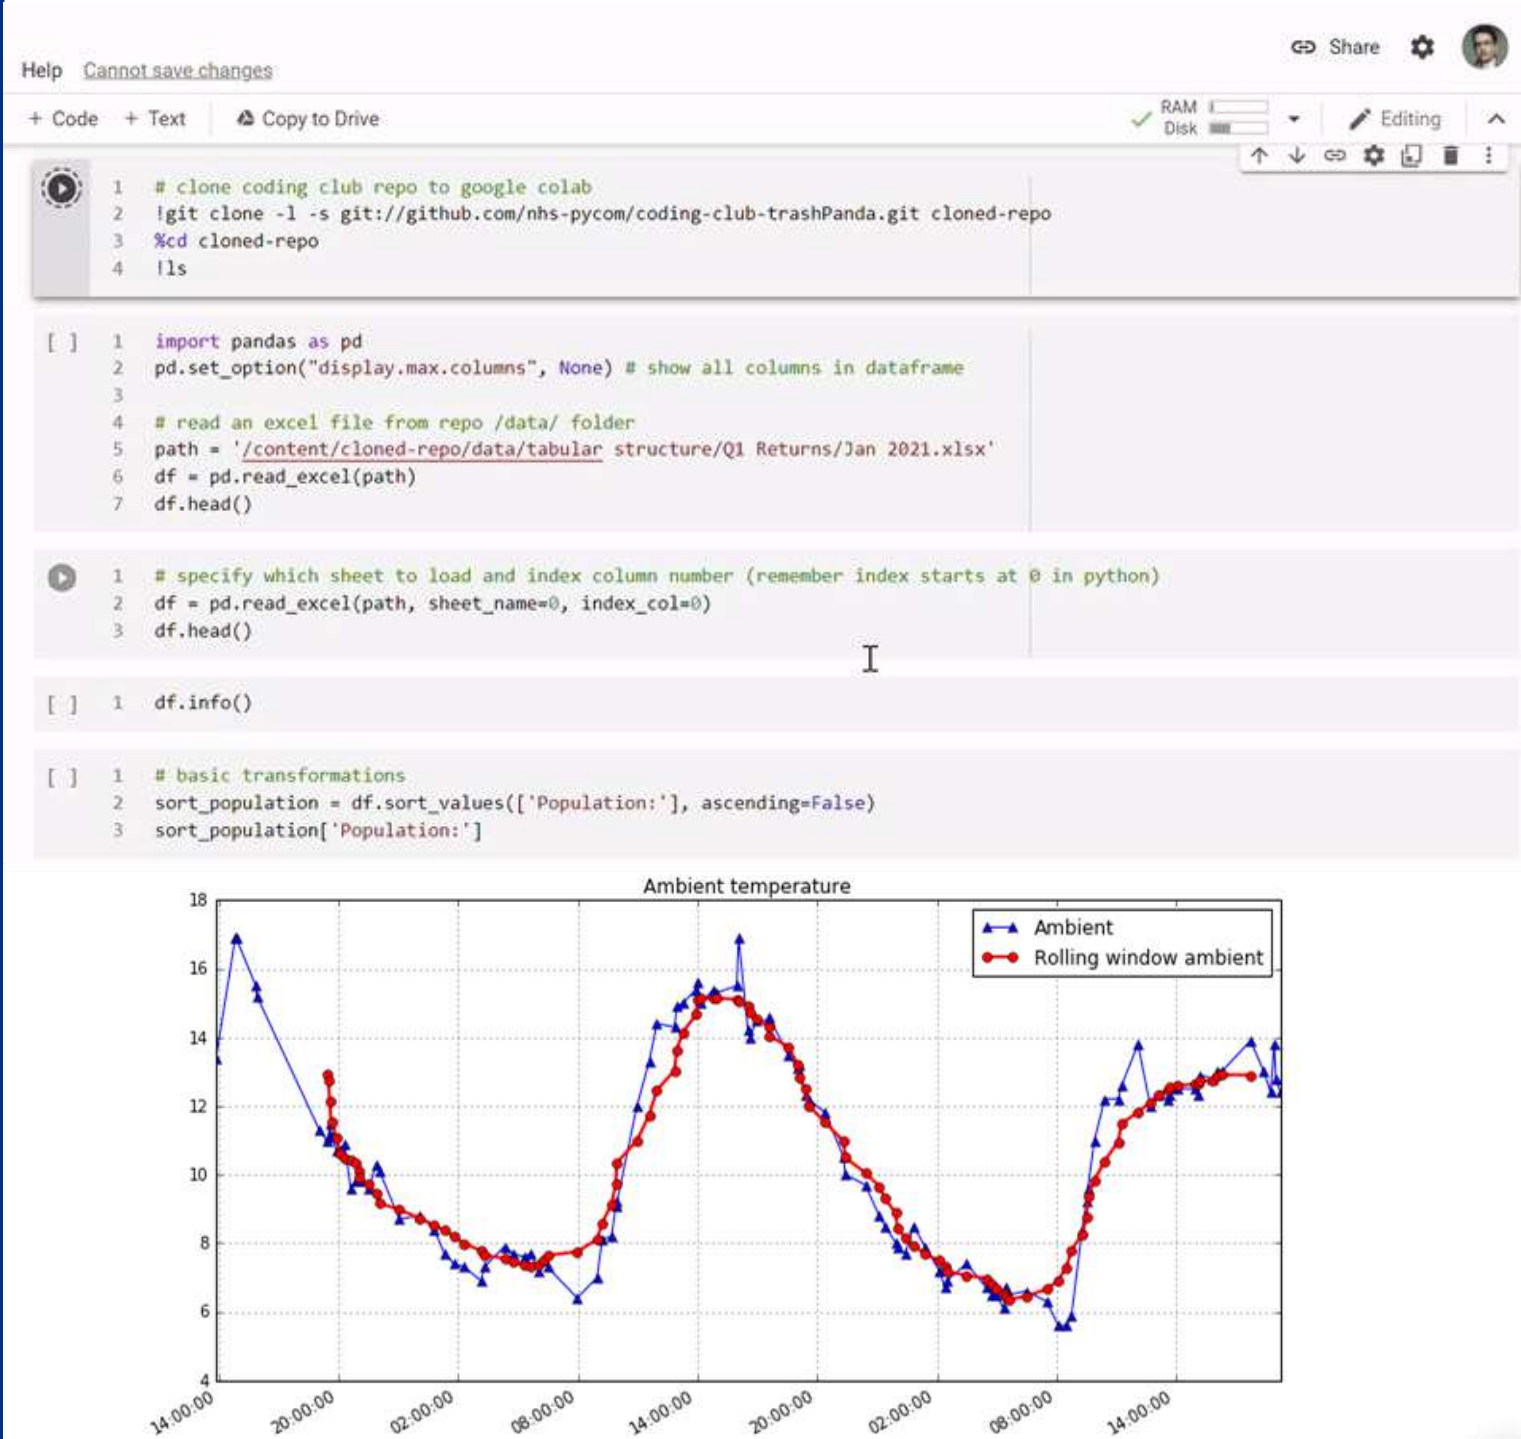

Publishing to public GitHub repositories, and using online coding platforms such as Google Colab.

Example:

# GitHub + Colab

- Access to all the tools required for python / Machine Learning / Artificial Intelligence
- Browser based, cross-platform (windows, mac, linux)
- No downloads required
- No install required
- No admin rights required
- Clone GitHub repo in one click

The screenshot shows a Google Colab notebook interface. At the top, there are navigation options like 'Help', 'Cannot save changes', '+ Code', '+ Text', and 'Copy to Drive'. The notebook contains several code cells:

```
1 # clone coding club repo to google colab
2 !git clone -l -s git://github.com/nhs-pycom/coding-club-trashPanda.git cloned-repo
3 %cd cloned-repo
4 !ls
```

```
[ ] 1 import pandas as pd
2 pd.set_option("display.max.columns", None) # show all columns in dataframe
3
4 # read an excel file from repo /data/ folder
5 path = '/content/cloned-repo/data/tabular structure/Q1 Returns/Jan 2021.xlsx'
6 df = pd.read_excel(path)
7 df.head()
```

```
[ ] 1 # specify which sheet to load and index column number (remember index starts at 0 in python)
2 df = pd.read_excel(path, sheet_name=0, index_col=0)
3 df.head()
```

```
[ ] 1 df.info()
```

```
[ ] 1 # basic transformations
2 sort_population = df.sort_values(['Population:'], ascending=False)
3 sort_population['Population:']
```

Below the code cells is a line plot titled "Ambient temperature". The x-axis represents time in 24-hour increments (14:00:00, 20:00:00, 02:00:00, 08:00:00, 14:00:00, 20:00:00, 02:00:00, 08:00:00, 14:00:00). The y-axis represents temperature in degrees Celsius, ranging from 4 to 18. The plot shows two data series: "Ambient" (blue line with triangle markers) and "Rolling window ambient" (red line with circle markers). Both series show a clear diurnal cycle, with temperatures peaking around 16°C during the day and dipping to around 7°C at night. The rolling window series is smoother than the raw ambient data.

## Aim 2.

# Champion the use of open source code and open data

So tools can be further developed, re-used ,and improved upon by everyone in the community

Example:

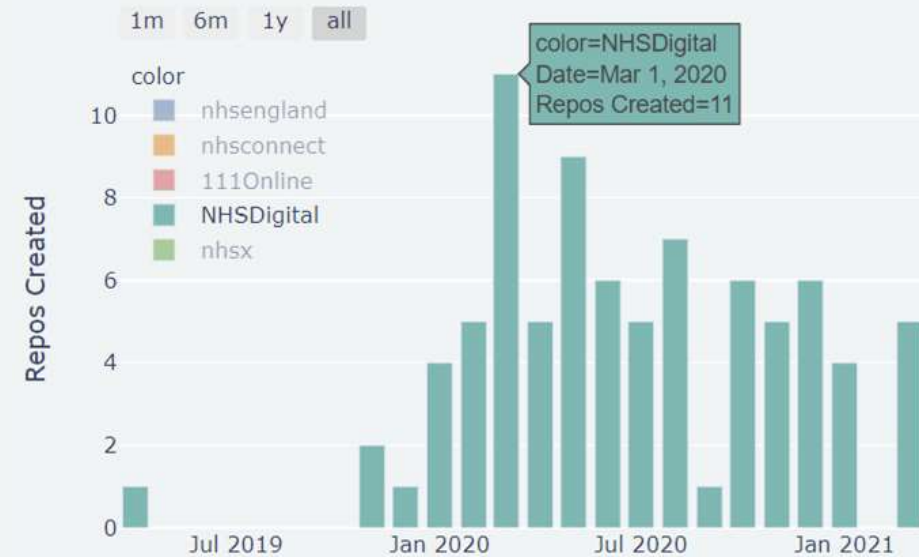

# Open NHS Code Repositories

- [Alpha] Collection of statistics on open source NHS github repositories
- Using end-to-end open source analytics: python, plotly, github.io, and github actions.
- Get your organisation added to the collection, email: [craig.shenton@nhsx.nhs.uk](mailto:craig.shenton@nhsx.nhs.uk)

## Statistics on open source healthcare repositories

[View the Project on GitHub](#)

# Aim 3.

## Break down silos of expertise

Improve technical communication and collaboration across the NHS and Healthcare sector

## Aim 4.

**Make coding accessible to ALL  
members of the healthcare community**

Regardless of background or current level of ability

# NHSX Early Careers feedback

Sharing best practice

Get feedback from experienced data scientists on data projects

Keep up with the latest developments in technology and apply them to the healthcare sector

Open solution are made available to avoid duplication

Work on cool projects

Learn a new skill

Get a coding role in the future

Become more confident with my ability to code

Expanding our career prospects and network

Create an open community for learning data science skills

# Fill in the survey to get involved

1. Suggestions/Feedback
2. Communications channel
3. Ideas for content
